## Supplier scouting: DigitalPA alongside companies looking for new suppliers

Today, companies operate within a global Supply Chain featuring a huge amount of suppliers and, at the same time, regulations that require tracking of all production processes and transparency on the origin of each raw material.

Having complete Sourcing process control is a key business process to ensure competitiveness in the market.

However, Supplier Relationship Management can still be related to spreadsheets and manual data entry, with no integration between management systems, getting to missing or inaccurate supplier profiles.

DigitalPA's **Supplier Portal** is a **centralized and global system gathering vendors** and allowing Buyers to access a large network of pre-qualified Suppliers in all main product sectors.

More than 80% of Suppliers enrolled in our Portal are companies already collaborating with other Buyers using Online Procurement or with Public Administration in our network. This is an extra reliability pledge as well as the assurance of their ability to meet requirements in terms of transparency both in processes management and sustainability.

## A growing Portal

A Supplier network with constantly increasing numbers

## Qualified

Over 80% of suppliers praising requirements compliant with Public Administrations

## Free

Data access included for Online Procurement Buyers; free qualification for Suppliers

## Smart scouting

Suppliers list can be directly reviewed within your Online Procurement platform: searching for new suppliers is simple, intuitive, and fast

# Accelerate the scouting process and build relationships with suppliers

Suppliers can register to the portal completely **free of charge**, allowing Buyers a wide choice of vendors, as well as no additional costs in purchasing orders.

The supplier pre-qualification process follows accurate steps of assessment on company data and documents: the process is designed to provide Buyers with complete information key to selecting the right Suppliers to involve in the onboarding process.

DigitalPA is proud of internationally recognized ISO certifications such as **ISO 9001** and **ISO IEC 27001**, which prove how quality and information security management are inherent in the company philosophy and all development processes.

All data available in the platform are protected by severe security and data protection protocols.

In addition, software maintenance closely follows technologies evolution and potential risks to ensure the full security protocols are applied to sensitive data processed within the applications.

### **Expand your market**

finding new qualified suppliers in a solid supply market

### **Reduce time and costs**

associated with searching references of new suppliers in your business sectors

### **Increase the cost/benefit ratio**

thanks to the onboarding of qualified partners with successful references

INFORMATION UPDATED REAL-TIME

## **High quality Data Analysis**

Access to constantly updated data and documents is essential to ensure the quality of the source cycle and risk mitigation.

Starting from the pre-qualification in the Supplier Portal, suppliers are required to keep all the data provided up-to-date.

When needed, an automatic monitoring system for deadlines sends notifications and requests for documents and certifications updates.

Everything according to categories relevant for that supplier.

## Keywords: automation and integration

All company information entered in the Supplier Portal is available for the Buyer **directly from their platform SaaS Online Procurement**: from documents to policies and certifications, up to risk profiles.

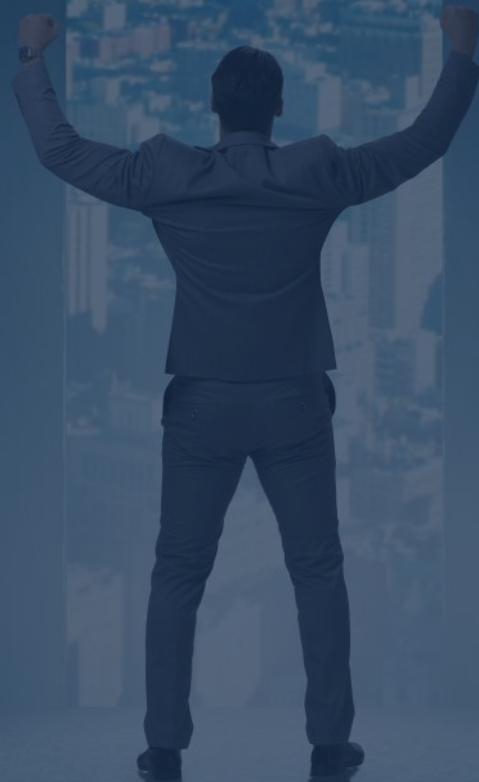

The interoperability and native integration between Online Procurement modules allow the Buyer to access all information from a **single interface**, resulting in less time and costs connected to analysis and scouting of new suppliers.

Our intelligent search engine can process data from internal requirements and shows **the best suppliers identified in the large pool of pre-qualified companies** available in our Supplier Portal within Online Procurement.

Following the preliminary assessment, Buyers will be able to select the Suppliers to be invited to submit a proposal and to qualify them more accurately within their custom Supplier Management system.
